DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,7,9,10, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Black et al(US 5,430,416).

The reference by Black et al discloses a PLL circuit, see figure 4, comprising an oscillator(405), a phase detector(403), an output amplifier(407) and a feedback path from the amplifier output. A second feedback path from the oscillator output, via switch 419, is shown. This path bypasses the output amplifier, during start up, when PA is initially turned on(disables the PA output from loop). The second feedback path is interrupted by the switch when lock is achieved.(see coll. 4, lines 25-45). A common portion including downconverting mixer(401) is shown. Block 415 shows the envelope restoration circuit that controls the gain of the PA(407).

Allowable Subject Matter

3. Claims 2-6 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
